

XID has signed the SDD Business agreement with DBSTAR

XID has already signed the SDD Business agreement with DBSTAR in February. **Satellite Data Delivery (SDD)** business is a high levels data entry business. Generally, The delivers data package through three platforms at present: WIFI, Internet and Satellite.

SDD value increasing service is a brand new business of China national Satellite Co. There are few unique advantages compared with others such as high efficiency, low cost, easy encrypt/decrypt especially the simply receiver devices. In recently the SDD becomes the major data providers in remote area such remote Transmission of medical Information and remote monitor and remote Transmission of GIS data and remote control of oil&mining company for P2P service especially lack of Ipx4 resource.

XID is the major data providers for database in China. The Mass Data storage technology and product was funded by China National Fund. The SDD service requires Data Entry, Data processing and Data Storage technologies. XID has unique advantage in future SDD business.
